Load necessary libraries

library(tidyverse) library(dsbox)

Load La Quinta dataset

data("laquinta")

Get dimensions of the La Quinta's dataset

dim_laquinta <- dim(laquinta) num_rows_laquinta <- nrow(laquinta) num_cols_laquinta <- ncol(laquinta)

Print results

print(paste("Dimensions of La Quinta's dataset:", dim_laquinta)) print(paste("Number of rows:", num_rows_laquinta)) print(paste("Number of columns:", num_cols_laquinta))

Inspect the first few rows to understand what each row represents and what the variables are

head(laquinta)
